a. Create a class "com.slk.training.dao.impl.PersonDaoJdbcImpl" which implements the interface "com.slk.training.dao.PersonDao".

Each of the methods must handle exceptions appropriately. Also check if the input parameters are correct as per the requirement.

Create a programs to test each functionality of the PersonDaoJdbcImpl class.

For example,

```
PersonDao dao = new PersonDaoJdbcImpl();
Person p1 = new Person("Suresh", "suresh@example.com", "9879876541");
try {
     dao.add(p1);
     System.out.println("Suresh's record added to the DB");
} catch (DaoException e) {
     e.printStackTrace();
}
```
